

**AMENDMENTS TO THE CLAIMS**

Please amend the claims as set forth below in marked-up form.

1. (Canceled)
2. (Currently Amended) A building heat recovery system, comprising:  
a central ventilation fan for collecting exhaust air from each room in the building for ventilation;  
a ventilation heat recovery device, wherein the ventilation heat recovery device comprises a heat sink, a Peltier device connected to the heat sink, a medium connected to the Peltier device and a power supply for the Peltier device, and wherein the ventilation heat recovery device conducts exhaust air heat from the central ventilation fan to the medium; and  
a thermal conduction sheet that radiates heat conducted via the medium to each room.
3. (Previously presented) The building heat recovery system according to Claim 2, wherein a thermal conduction material is used as said medium, and wherein there is no movement of the thermal conduction material.
4. (Previously presented) The building heat recovery system according to Claim 2, wherein the medium is selected from a group consisting of a fluid other than air, a solid and a mixture of a fluid and a solid.
